

DEPARTMENT OF INFORMATION SCIENCE AND ENGINEERING

PREDICTIVE MAINTENANCE - INNOVATION CENTER

BMSCE-ISE with Waferspace inaugurated Predictive maintenance

Innovation center on 11th oct, 2017.

The Innovation Centre concentrates on prediction with a combination of IOT technologies, analytics software and cloud applications. It is expected that the deployment of this solution would help in predicting failures well in advance that can help in reducing downtimes and minimizing cost of maintenance. The extended functions from the analytical modules are expected to help in long term decision making with respect to assets by providing information on the performance and cost in an easily interpretable fashion.
